

SKILL.md (validate-correctness)

Description

Validates code changes by comparing per-step loss curves between branches.

Triggers

"validate correctness", "compare loss curves", ...

Prerequisites

- activate environment in repo root
- benchmark input prepared
- sufficient GPUs available

Procedure

1. worktree the base branch
2. run N steps on each branch
3. run `python compare.py base.log feat.log`
→ `exit 0=PASS, 1=FAIL`
4. clean up worktree

Specific Scope

**Explicit
Prerequisites**

**Verifiable
Success**
